

# Master in Life Sciences

A cooperation between  
BFH, FHNW, HES-SO, ZFH

<b>Module</b>	<b>Chemical Engineering &amp; Process Intensification</b>
<b>Code</b>	MLS_S04
<b>Degree Program</b>	Master of Science in Life Sciences (MSLS)
<b>Cluster</b>	Chemistry
<b>Specialization</b>	Chemical Development and Production
<b>ECTS Credits</b>	4
<b>Workload</b>	120 h: Contact 56 lessons = 42 h; Self-study 78 h
<b>Module Coordinator</b>	<p><b>Name</b> Dr. Thierry Chappuis</p> <p><b>Phone</b> +41 (0)26 429 67 14</p> <p><b>Email</b> <a href="mailto:thierry.chappuis@hefr.ch">thierry.chappuis@hefr.ch</a></p> <p><b>Address</b> Haute école d'ingénierie et d'architecture de Fribourg, Bd de Pérolles 80, CH-1700 Fribourg</p>
<b>Lecturers</b>	<ul style="list-style-type: none"> <li>• Dr. Christophe Allemann, HEIA-FR</li> <li>• Dr. Thierry Ursenbacher, HEIA-FR</li> <li>• External lecturers</li> </ul>
<b>Entry Requirements</b>	Bachelor of Science in Chemistry or in a related field including chemical engineering, chemical reaction engineering, chemical kinetics (at Bachelor level), basic functional knowledge of mathematical software package (Matlab, GNU Octave, Python, Berkeley Madonna or Mathematica).
<b>Learning Outcomes and Competences</b>	<p>The objectives are to study and understand the operations and engineering aspects underlying process intensification, flow chemistry and the use of microreactors.</p> <p>The student will be able to:</p> <ul style="list-style-type: none"> <li>• List and evaluate the important strategies used to intensify chemical processes</li> <li>• Evaluate the feasibility of a chemical reaction in an intensified unit (e.g. a microreactor)</li> <li>• Know how to engineer a microreactor and how to implement heterogeneous catalysis in it</li> <li>• List and evaluate the possibilities of mixing reaction and separation in a single integrated processing unit.</li> </ul>
<b>Module Content</b>	<p>The module is structured as follows:</p> <ul style="list-style-type: none"> <li>• Introduction about process intensification and flow chemistry</li> <li>• Flow chemistry: examples and use cases</li> <li>• Engineering aspects underlying microreactors design</li> <li>• Fluidic aspects underlying microreactors design</li> <li>• Microreactor types, classification criteria for chemical reactions and technology choices (external lecturer)</li> <li>• Heterogeneous catalysis in microreactors</li> </ul>

	<ul style="list-style-type: none"> <li>• Integrated processes and ISPR</li> <li>• Integrated processes and reactive extraction</li> <li>• Integrated processes and membrane reactors</li> <li>• Integrated processes and reactive distillation</li> <li>• Process efficiency</li> </ul>
<b>Teaching / Learning Methods</b>	<ul style="list-style-type: none"> <li>• Lectures</li> <li>• Presentations of external lecturers from industry</li> <li>• Case studies</li> <li>• Active participation in the module is requested</li> </ul>
<b>Assessment of Learning Outcome</b>	<ul style="list-style-type: none"> <li>• Final examination (written): 100 % of the final grade</li> <li>• Reassessment: written exam</li> </ul>
<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• W. Ehrfeld, V. Hessel &amp; H. Lowe, Microreactors: new technology for modern chemistry, Wiley-VCH, Weinheim, 2004</li> <li>• T. Wirth, Microreactors in organic chemistry and catalysis, , Wiley-VCH, Weinheim, 2013</li> <li>• H.S. Fogler, Elements of chemical reaction engineering, 5<sup>th</sup> edition, Prentice Hall, Upper Saddle River, 2016</li> <li>• F. Keil, Modeling of process intensification, Wiley-VCH, Weinheim, 2007</li> </ul> <p>Documentation: <a href="http://cyberlearn.hes-so.ch">http://cyberlearn.hes-so.ch</a> (requires a login)</p>
