

Module	Analytics and Characterization
Code	MLS_S22
Degree Program	Master of Science in Life Sciences (MSLS)
Cluster	Chemistry
Specialization	Chemical Development and Production
ECTS Credits	4
Workload	120 h: Contact 56 lessons = 42 h; Self-study 78 h
Module Coordinator	<p>Name Dr. J.-P. Bourgeois</p> <p>Phone +41 (0)26 429 67 15</p> <p>Email jean-pascal.bourgeois@hefr.ch</p> <p>Address Haute école d'ingénierie et d'architecture de Fribourg, Bd de Pérolles 80, CH-1700 Fribourg</p>
Lecturers	<ul style="list-style-type: none"> • Cyril Portmann (HEIA-FR) • Olivier Nicolet (HEIA-FR) • J.-P. Bourgeois (HEIA-FR) • Pierre Brodard (HEIA-FR) • External experts • Guest lecturers
Entry Requirements	Bachelor of Science in Chemistry or in a related course of study including basic knowledge in analytical and physical chemistry.
Learning Outcomes and Competences	<p>After completing the module students will be able to:</p> <ul style="list-style-type: none"> • Understand and explain time-resolved spectroscopic methods used to measure ultrafast kinetics • Understand and explain high-resolution methods used to image solids and surfaces at the atomic-scale • Understand and explain physical chemistry methods applied to industrial domains and the capability of a process. • Understand and apply the validation of method in the frame of accredited laboratory. • Understand analytical laboratory accreditation process • Understand and apply NMR spectroscopy to conduct quantitative analyses. • Understand and explain principle and applications of immunoassays • Understand state of the art analytical techniques applied to the field of natural product chemistry • Elaborate analytical method from sampling to publication of results

<p>Module Content</p>	<p>Advanced methods of physical characterization:</p> <ul style="list-style-type: none"> • nanosecond fluorescence decay by time-correlated spectroscopy • picosecond/femtosecond kinetics by pump-probe methods (transient absorption, transient grating, fluorescence up-conversion) • atomic-scale topography by scanning probe methods <p>Quantitative NMR (qNMR)</p> <p>Immunoassays</p> <ul style="list-style-type: none"> • ELISA, Electrochemiluminescence, Western Blot, Lateral Flow Assay • Validation of immunoassays • Applications of Immunoassays <p>Advances analytical techniques in natural product chemistry</p> <p>Particles size distribution characterization</p> <p>Applied environmental analysis</p> <p>Analytical method validation</p> <p>ISO17025, ISO17034</p>
<p>Teaching / Learning Methods</p>	<ul style="list-style-type: none"> • Lectures • Individual and group exercises • Field trip and laboratories visit (mandatory) • Active participation in the module is requested
<p>Assessment of Learning Outcome</p>	<ul style="list-style-type: none"> • Final examination (oral): 100 % of the final grade • Reassessment: oral exam within four weeks after the publication of the grades.
<p>Bibliography</p>	<ul style="list-style-type: none"> • Literature and regulatory guidelines will be provided during lectures.
<p>Language</p>	<p>English</p>
